WHO WE ARE

About Maliban Wovens

Maliban Wovens (Pvt) Ltd is a woven apparel manufacturer and part of the Maliban Group, headquartered in Colombo, Sri Lanka, manufacturing since 1974. We operate as a vertically integrated partner to global fashion brands covering design, sourcing, cutting, sewing, finishing, testing, and packing across facilities in Sri Lanka. Our approach centers on three things: a fully connected manufacturing ecosystem, disciplined quality and compliance, and a genuine, measurable commitment to sustainable production.

What We Make

Woven Bottoms

Cargo pants, formal trousers, semi-formal pants, skirts, shorts, chinos, casual wear, and joggers, men's and women's.

Suiting & Outer Wear

Blazers, suiting, tailored jackets, sport jackets, and formal suits, men's and women's.

Knit Cut & Sew

Tops and bottoms across men's and women's ranges, produced alongside our woven lines within the same integrated ecosystem.

Design & Development Capability

Concepts move from sketch to sellable sample without leaving our own floor. Our design and development team works in WGSN for trend intelligence, Adobe Illustrator and Photoshop for technical design, and CLO and Browzwear for 3D virtual prototyping and fit approval letting buyers review and approve samples digitally before a single piece of fabric is cut.

Manufacturing Process

Every order moves through the same disciplined, fully in-house sequence:

- Design & R&I - trend research and technical design
- 3D Prototyping - virtual samples for fit and design validation
- Fabric & Trim Sourcing - accredited, traceable material partners
- Smart Automation - automated cutting and sewing technology
- Embroidery - laser and multi-head embroidery capability
- Printing - screen print, rotary print, and heat seal
- Color Laboratory - precision color matching and approval
- Washing & Finishing - sustainable wash technology
- Physical Testing - in-house accredited testing laboratory
- Corrugated Packing - in-house carton and packing capability

Quality & Compliance

Our physical testing laboratory is accredited directly by several of the global brands we manufacture for, meaning testing protocols are aligned to buyer-specific standards rather than a generic baseline.

Certifications & Standards We Work To

OEKO-TEX Standard 100 · **Global Organic Textile Standard (GOTS)** · **Global Recycled Standard** · **Better Cotton Initiative** · **Fairtrade Cotton** · **bluesign** · **ZDHC Gateway**

We also participate in the Higg Index Facility Environmental Module (FEM), tracking and verifying our environmental performance year over year rather than relying on a one-time audit.

Sustainability

Sustainability is engineered into the production line itself, not treated as a separate initiative:

Energy

- Rooftop solar generation
- Variable Speed Drives (VSD) on machinery and compressors
- Vapor Absorption Machines (VAM) - steam-driven chillers requiring no electricity
- LED and natural lighting, condensate and flash-steam heat recovery

Water

- E-flow nanobubble washing technology
- UP Technology and G2 Ozone dyeing/finishing systems
- On-site wastewater treatment with reuse capability

Chemical Management

- Process chemicals managed to ZDHC RSL Level 1 or above
- Laundry 5-Zero technology - zero discharge, no manual scraping or grinding, no PP spray, no stone, no bleach

Sustainable Materials

Fabric sourcing includes organic cotton and Better Cotton Initiative (BCI) cotton alongside conventional cotton, giving buyers a choice of sustainable fiber programs to specify against.

Sustainable Roadmap

We work through a phased environmental program water footprint auditing, energy management systems, carbon footprint quantification and certification, formal environmental management systems, and chemical risk/GHS management developed in partnership with Sri Lanka's National Cleaner Production Centre.

Digital & Supply Chain Systems

Buyers integrate with us directly through PLM, giving real-time supply chain visibility rather than relying on periodic status updates.

GT Nexus · WFX PLM · GSD (Coats) · FastReact · M+

On the shop floor, the same digital backbone covers quality management, machine management, skill management, line planning, and manufacturing execution so a delay or defect is visible immediately, not discovered at final inspection.

People & Community

P.A.C.E. - Personal Advancement & Career Enhancement

An ongoing internal program supporting our workforce (predominantly women) in self-esteem, self-efficacy, workplace efficacy, and workplace influence building supervisory and leadership capability from within.

Corporate Social Responsibility

- Donated a fully equipped auditorium to St. Aloysius College, Galle
- Contributed toward reconstruction and rehabilitation efforts for churches affected by the 2019 attacks, in coordination with Cardinal Malcolm Ranjith
- Donated a full urology and nephrology surgical unit to the National Hospital of Sri Lanka, Colombo
- Ongoing dry rations distribution program supporting company employees

Looking Ahead

Our roadmap through 2028 centers on responsible fashion: deeper digital integration across the supply chain, a continuously upskilled organization, and the right manufacturing partnerships in the right locations to keep pace with how our buyers work.

Get in Touch

Looking for a manufacturing partner? We'd welcome the conversation.
